

Kambly puts electric filling stations on the Bern-to-Lucerne stretch of the Grand Tour

At the Kambly Experience in Trubschachen, Kambly is now offering three public fast-charging stations with four charging spaces for electric vehicles. Installed in cooperation with Groupe E, the charging stations are part of the MOVE charging network, which has over 800 MOVE charging points across Switzerland.

While their electric vehicle fills up on fuel generated by the flow of fresh Swiss water, visitors to the Kambly Experience in Trubschachen can take pleasure in some biscuit tasting, enjoy some refreshments in the cafeteria, delve into Kambly's history, look over the shoulders of the confectioners at work, and do some shopping. The four charging spaces installed in the customer car park allow electric vehicles to be rapidly charged using direct current (DC) or alternating current (AC) at up to 50kW and therefore in less than an hour. Connector cables with CHAdeMO and CCS plugs are available for fast charging using DC, and a connector cable with a Type 2 plug for AC. These electric charging stations close a major gap in provision on the stretch between Bern and Lucerne and therefore on the Grand Tour of Switzerland (<https://grandtour.myswitzerland.com/>).

Easy to use

A smartphone, credit card or TWINT account can be used to initiate charging. It is even easier with a MOVE card, which guarantees access to 800 MOVE charging points plus 2,700 other charging points in Switzerland and a total of 35,000

charging points across Europe. For any queries or problems relating to the MOVE charging points, there is a 24-hour hotline available. If necessary, this can also organise a breakdown service through Mobi24.

Strong ethical values and understanding of sustainability

Sustainable development is a core value at Kambly and is firmly embedded in both the owner's strategy and the corporate strategy. The family-run business maintains a long-term, multi-generational perspective and believes it is essential to contribute to an enduringly habitable world. This is why all the electricity used by Kambly comes from Swiss hydropower – including for the fast-charging stations. Sometimes it is even possible to fill up with Emmental electricity, as Kambly buys the total electricity output of the Wannenfluh hydropower plant in Rüderswil. By doing so, Kambly is helping to bolster the Emmental region, just as it is when processing the Emmental butter, flour and eggs that give Kambly's Bretzeli and other specialities their incomparable taste.

Location of the charging stations:

Kambly Experience, Mühlestrasse 8, 3555 Trubschachen

The Kambly family company

Kambly has epitomised the Swiss tradition of fine biscuits for four generations. Each masterpiece from Kambly is a small thank you for life; a declaration of love for the very best; the peak of fine, elegant taste. Kambly is a way of life, dedicated to all those who appreciate the difference between the best and the merely good.

Kambly is wholly owned by the family of Oscar A. Kambly. Under the management of Oscar A. Kambly, Chairman of the Board of Directors, and Hans-Martin Wahlen, CEO, a total of 570 employees manufacture and distribute the fine Swiss biscuit and savoury snack specialities worldwide.

As a biscuit manufacturer, Kambly has the highest sales and is the leading exporter in Switzerland. The Kambly brand is the best-known and most popular biscuit brand in Switzerland and the leading brand in the premium segment in France. 47% of consolidated sales of over CHF 180 million are generated abroad. Kambly has a presence in 50 countries on all five continents and is regarded as a quality and innovation leader in the premium fine biscuit segment worldwide.
